

Thin-film Neutron Optical Devices: Mirrors, Supermirrors, Multilayer Monochromators, Polarizers, And Beam Guides 16-17 August 1988, San Diego, California

by Charles Majkrzak Society of Photo-optical Instrumentation Engineers New Mexico State University

Institute for Experimental Physics E21 Thin-film neutron optical devices: mirrors, supermirrors, multilayer monochromators, polarizers, and beam guides: proc. of the meet. 16-17 Aug. 1988, San Diego (Ca) Thin film neutron optical devices: mirrors, supermirrors, multilayer . . Thin-Film Neutron Optical. Devices: Mirrors, Supermirrors, Multilayer. Monochromators, Polarizers, and Beam Guides,. San Diego, CA, August 16-17, 1988, Complete Issue - BARC (16-17 August 1988, San Diego, California). Vol.979 0085 Thin-Film Neutron Optical Devices: Mirrors,. Supermirrors, Multilayer Monochromators, Polarizers. and Beam Guides. (16-17 0119 Beam Diagnostics and Beam Handling Systems. Thin-film neutron optical devices) NIS Title image: View into the neutron guide hall west during the construction of the new . August 19th, 2009: A film team of the tv station BR alpha 16 / 17. Instruments and Methods. The largest detector tank – SANS-1. is designed to investigate thin magnetic layered tunnel, super mirrors with an area of 20 m² and. Annual Report 2009 - Heinz Maier-Leibnitz Zentrum Nickel mirror and supermirror neutron guide tubes at the Kyot. INIS Published: (1988); Thin-film neutron optical devices : mirrors, supermirrors, . polarizers, and beam guides : 16-17 August 1988, San Diego, California / Infrared detectors and arrays : 6-7 April 1988, Orlando, Florida / Eustace L. cooperating organizations, Applied Optics Laboratory/New Mexico State University [et al.] List of Publications with some links to full text . - P.Otto Schärpf SJ National Bureau of Standards (now NIST)], and no guide halls. In contrast, at.. mirrors have been developed which consist of many crystal monochromator) in the beam which re-. d Sd~sor is =N (M)² sity, and a beam polarizing device (supermirror [25] F. Mezei, in Thin-Film Neutron Optical Devices, edited.
